Twin Turbo Scan & Search —This lightning-fast technology enables the **UBC180XLT** to scan nearly 100 channels per second. Search speed is selectable between 100 and 300 steps per second. (300 steps per second only in bands with 5 kHz steps.) Because the frequency coverage is so large (see previous section for band listing), very fast scanning and searching are essential. That is why we combined our latest technology — Twin Turbo — into the **UBC180XLT**.

100 Channels You can program each of these memory channels to store one frequency.

14 Bands, 10 Banks Includes 14 Bands, with Aircraft and 800 MHz. 10 Banks of 10 channels each are useful for storing similar frequencies in order to maintain faster scanning cycles.
